SKILLS

- **Languages and Framework:** JavaScript | React | Python | Django | HTML+CSS | WordPress | Tailwind CSS | Bootstrap | MUI | Accredo Script (for ERP integration)
- **DevOps & CI/CD:** CircleCI | GitHub Action | Vercel | AWS Amplify CI | Azure DevOps Pipelines
- **Cloud Technologies:** AWS: EC2, S3, RDS, ECR, ECS | Azure: Virtual Machines, App Service, Blob Storage, SQL Database | Containers: Docker, Docker Compose, Container-based continuous deployment on EC2, ECS & Azure App Service
- **Tools & Methodologies:** Agile | Scrum | Git | GitHub | Kanban | Postman | Selenium | JIRA | Confluence
- **AI & Automation:** n8n | RAG | LangChain | OpenAI | Prompt Engineering | Workflow Design | API Orchestration | Fine-tuning

WORK EXPERIENCE

INDEPENDENT WEB DEVELOPER

Freelance, Auckland, December 2023 – present

1 year 8 months

- Independently sourced and secured SME clients by building trust through clear communication and delivering measurable value, earning referrals and long-term collaborations.
- Delivered 5+ tailored websites and internal systems (vehicle distribution, podiatry booking, timesheet portal) that improved user engagement by 35% and cut admin workload by 40% by analysing clients' pain points and developing applications with **React and Django**.
- Reduced clients' repetitive manual tasks by 80% by building **AI-driven automation** solutions or **fine-tuning** pretrained LLM (email-based quoting, invoice-to-QuickBooks sync, blueprint-to-quote generator) with **n8n, LangChain, and AI agents**.
- Enabled clients to secure **investment** and expand operations by providing end-to-end project delivery and long-term technical support.

SOFTWARE DEVELOPER

Brunton NZ Ltd, Auckland, September 2024 – April 2025

8 months

- Proactively took over the payroll process for two clients, identifying time-consuming work and system limitations. Cut payroll manual work time by 60% by creating three configurable VBA tools (Leave Rate Comparison, Leave Balance Tracker, Location-Based Request Filter), and training staff to adopt them.
- Reduced repetitive ERP work by 90% by designing Accredo Scripts that automated data handling and streamlined production workflows.

EDUCATION

- Master's in Information Technology (Candidate): AIS, Auckland, Expected Graduation: December 2025

PROJECTS

FINE-TUNED AI-BASED IELTS WRITING EVALUATION SYSTEM

- **Role:** Researcher, project coordinator and full-stack developer
- **Overview:** The system integrates retrieval-augmented generation (RAG) and vector database, with fine-tuning of the LLM, to achieve consistency and accuracy in AI-generated scores compared to official examiners, reducing the score gaps.
- **Impact:** Using ChatGPT Supervised Fine-Tuning (SFT) re-trained gpt-4.1 with a final training loss of 0.782, addressing the AI writing evaluation “regression to the mean” problem.
- **Tech Stack:** OpenAI Assistant | RAG | Fine-tuning | LangChain | Chroma | n8n | React | Django | REST API | Token-based Auth | GitHub Actions | Vercel

AI Automation & Workflow Orchestration

- **Role:** Business analyst and developer
- **Overview:** Built intelligent, end-to-end automation systems using n8n to integrate AI agents (OpenAI), web crawlers, APIs (Google, Facebook, Telegram, WhatsApp, Serpapi, and Jina), and dynamic workflows for content extraction, summarisation, and communication across multiple platforms.
- **Tech Stack:** n8n | OpenAI Chat API | Firecrawl | Google Calendar, Gmail and Drive Integration | Telegram Bot | API Polling & Webhooks | JSON Schema Prompts | Audio Generation (TTS) | Dynamic Cron Workflows | Error-Handled Loops

OPEN MOTOR AUTOMOTIVE DISTRIBUTION WEBSITE

- **Role:** Business analyst, project coordinator and full-stack developer to collect and confirm the requirements, scoping and development.
- **Overview:** Open Motor is a car distribution platform designed for car dealers and individual sellers, with a React frontend and a Django backend. Implemented AWS services for Open Motor platform deployment, including EC2, S3, Amp and Lambda. Utilised GitHub Actions and AWS for CI/CD pipeline automation, reducing deployment time by 80%
- **Impact:** Integrating Google and Facebook sign-in via OAuth 2.0 increased user registrations by about 40%. Meanwhile, adding 10 service choices per vehicle and automating calculations for reserve price, benefit, and quotes streamlined dealer workflows, boosting listing efficiency by over 35%.
- **Tech Stack:** Google and Facebook Integration | OAuth 2.0 | AWS | Docker | MUI | Generate invoice | Role-Based Access Control (RBAC) | AI-based Chatbot | n8n

PAYROLL PROCEDURE OPTIMISE

- **Role:** Business analyst and developer
- **Overview:** Analysed payroll data and developed three automation tools to enhance payroll efficiency, minimise manual effort, and ensure pay run consistency
- **Impact:** Achieved a 60% reduction in manual work. Leveraged Accredo Script to automate workflows, minimising manual interventions and delays. Freed staff for higher-value tasks.
- **Tech Stack:** Python | VBA
